

Diners API

Base URL is `localhost:4000/v1/app`

Diners

Endpoints for managing diners.

GET ALL DINERS

GET

`/diners`

Get All Diners

Retrieve a list of all diners.

NOTE: Assuming you haven't modified the db, this will return seeded diners (see example below). I used when manually testing basic functionality of db in controlled post-seed state.

Example URI

GET `/diners`

Response `200`
