

Restaurants API

Base URL `localhost:4000/v1/app`

Restaurants

SEARCH RESTAURANTS

GET

`/restaurants{?diners,time}`

Search Restaurants

Returns a list of restaurants filtered by diner restrictions and time.

Example URI

GET /restaurants?**diners=**&**time=**

URI Parameters

Hide

diners `array[number]` (required)

A comma-separated list of diner IDs representing specific restrictions/preferences. Example: `diners=1,2,3`.

time `string` (required)

Unix timestamp (in seconds) used to filter restaurants based on reservation availability. Example: `?time=1733844600`.

Request Example: ``?diners=1,2,3&time=1733844600``

Response `200`
